Practice 5 - Integrate a cloudflare app

INFRAESTRUCTURA PARA EL DESARROLLO CONTINUO

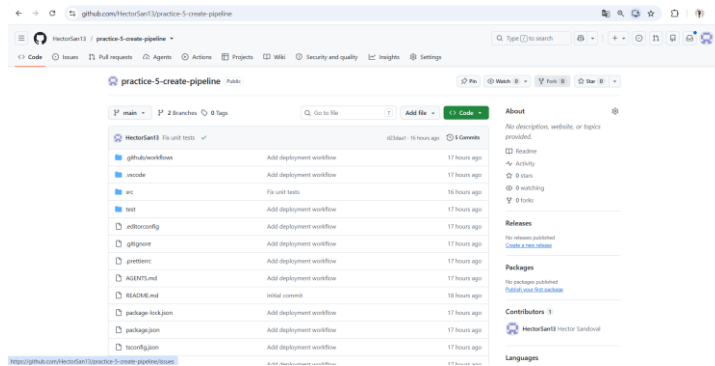

Héctor Alfonso Sandoval Bautista

737119

18/09/2026

Nombre del profesor: **LUIS EDUARDO ESTRADA RODRIGUEZ**

1.Create a Public or private repo in GitHub

2.Clone the new repo

```
PS C:\Users\sando\Desktop\INFRAESTUCTURA PARA EL DESARROLLO CONTINUO\practice-5-create-pipeline> git status
On branch main
Your branch is up to date with 'origin/main'.

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    Practice 5 - Integrate a cloudflare app.docx
    ~$actice 5 - Integrate a cloudflare app.docx

nothing added to commit but untracked files present (use "git add" to track)
```

3.Create a new project using cloudflare cli

```
PS C:\Users\sando\Desktop\INFRAESTRUCTURA PARA EL DESARROLLO CONTINUO\practice-5-create-pipeline> npx -y create-cloudflare@latest . --type hello-world --lang ts --no-deploy --no-git

Welcome to create-cloudflare v2.72.9!
Let's get started.
Cloudflare collects telemetry about your usage of Create-Cloudflare.

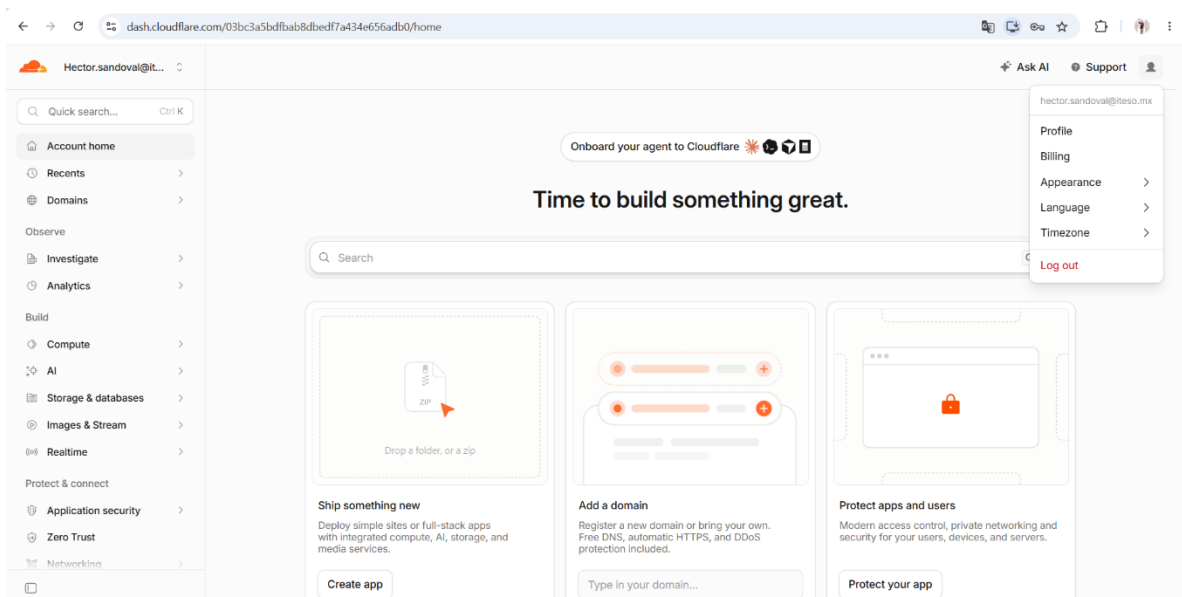

Learn more at: https://github.com/cloudflare/workers-sdk/blob/main/packages/create-cloudflare/telemetry.md

Create an application with Cloudflare Step 1 of 3

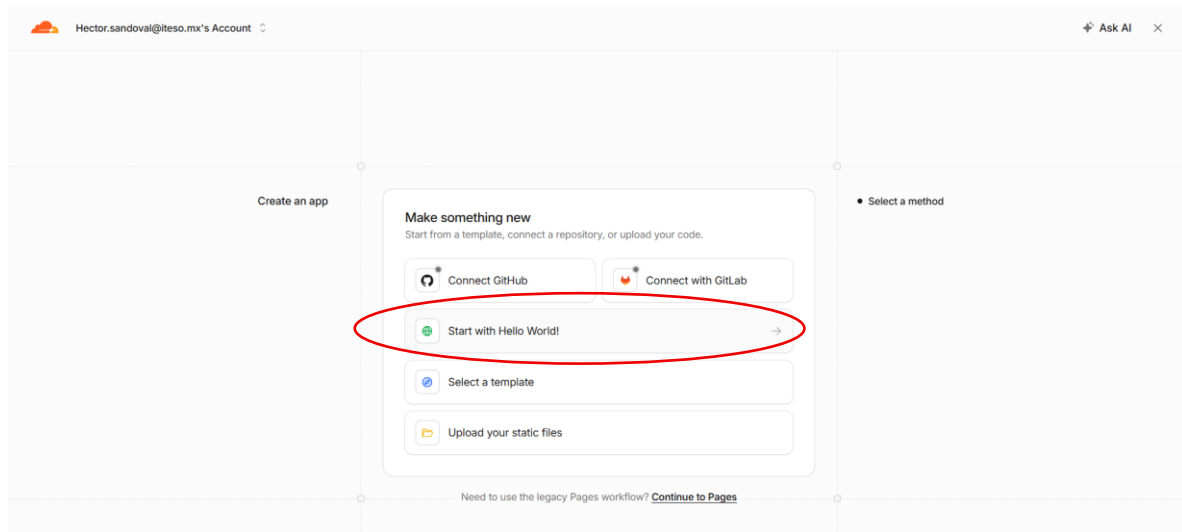

ERROR Directory "." already exists and contains files that might conflict. Please choose a new name.

In which directory do you want to create your application? also used as application name
./undefined
```

4.Create a cloudflare account

5. In the Build/Compute options go to workers and Pages

6. Create a new application

The screenshot shows the 'Workers & Pages' dashboard. At the top, there's a 'View docs' link and a 'Create application' button. Below this is a search bar and filters for 'Show all' and 'Last modified'. A single application is listed: 'cool-sky-8509' with the URL 'cool-sky-8509.hector-sandoval.workers.dev', created '16h ago'. Below the application name is a 'View deployments' link and deployment statistics: '2 requests' and '0.4 ms'. At the bottom, it says 'Showing 1-1 of 1' with pagination controls.

7. Link with GitHub and select the new repo

The screenshot shows the 'Actions secrets and variables' page in a GitHub repository. The left sidebar contains navigation links: General, Access (Collaborators, Moderation), Code, planning, and automation (Rulesets, Branches, Tags, Actions, Webhooks, Copilot, Planning), Environments, Codespaces, Pages, Security and quality (Advanced Security), and Deploy keys. The main content area is titled 'Actions secrets and variables' and includes a description of secrets and variables. It has tabs for 'Secrets' and 'Variables'. Under 'Environment secrets', it states 'This environment has no secrets.' with a 'Manage environment secrets' button. Under 'Repository secrets', there is a table with two secrets:

Name	Last updated
CLOUDFLARE_ACCOUNT_ID	17 hours ago
CLOUDFLARE_API_TOKEN	17 hours ago

A 'New repository secret' button is located at the top right of the repository secrets section.

8. Deploy the application
